

Public Meeting of the California Institute for Regenerative Medicine

ACHIEVING OUR MISSION THROUGH FUNDING INDUSTRY: UPDATE TO CIRM STRATEGIC PLAN

WHO: California Biotechnology & Pharmaceutical Industry Executives

WHAT: As the effort to cure or treat disease using stem cell technologies moves closer to the clinic, expertise in clinical trial development and execution, regulatory requirements, and large-scale Good Manufacturing Practices (GMP) will be needed in California. CIRM seeks to promote this capacity by funding projects in the commercial sector. One of CIRM's primary goals will be to promote and facilitate the involvement in CIRM programs of appropriate commercial entities, so as to harness their unique expertise and resources in the regulatory, clinical, manufacturing, and research arenas. We are seeking input on our strategies and tactics to achieve our goals within CIRM's lifetime.
